

Marco Merendi & Diego Vencato

Project

SOIRÉE

Multi purpose rechargeable lamp

Client

Fratelli Guzzini

Fratelli Guzzini works with plastic molding, a technology that allows infinite precision in details. Hence the idea of designing an object that is perceived as precious, refined and enduring, an elegant lamp in proportions and endowed with a certain grace.

We decided to insert all the electronics at the top, in the diffuser, which then becomes the nomadic component of the project: the same element makes it possible to have a table lamp, a suspension lamp, a floor lamp and a wall lamp, simply by adding an accessory.

Thus the image of an archetypal object is recovered: it's the lantern, a light that moves with you and brings to mind the scents of a summer garden.

These characteristics make the lamp a delicate object that fits easily in any context both indoor and outdoor.
